2 Smart Gate System

Smart Gate System

❑ Goal

An auto gate opened by using RFID cards and face recognition.

Local website to manage members and in/out activities

Application:

Efficient mechanical structure: reduces energy and opening/closing time

Parking lot

Company

Train station

Smart Gate System

❑ Overview of the system

RFID cards

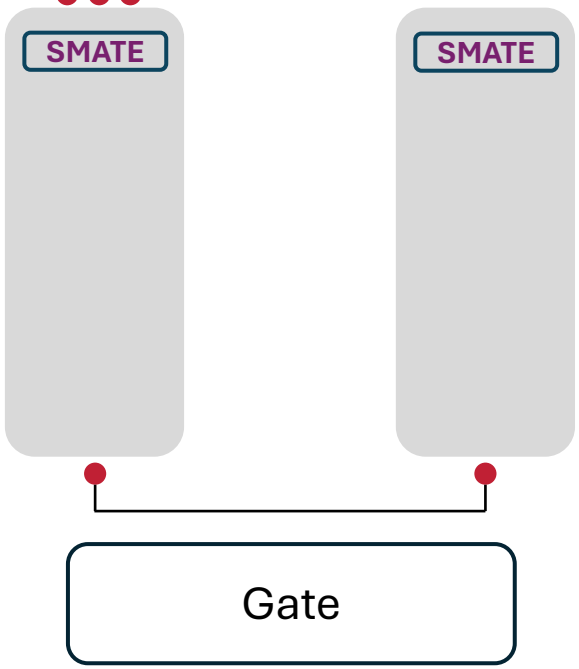

Face detection

UID reader

Using to store new card data

Gate

Local website

Manage members, store in/out data, visualize data

Smart Gate System

❑ My contribution

Local website

- Building database by XAMPP & MySQL ✓
- Develop website by PHP, html, javascript. ✓

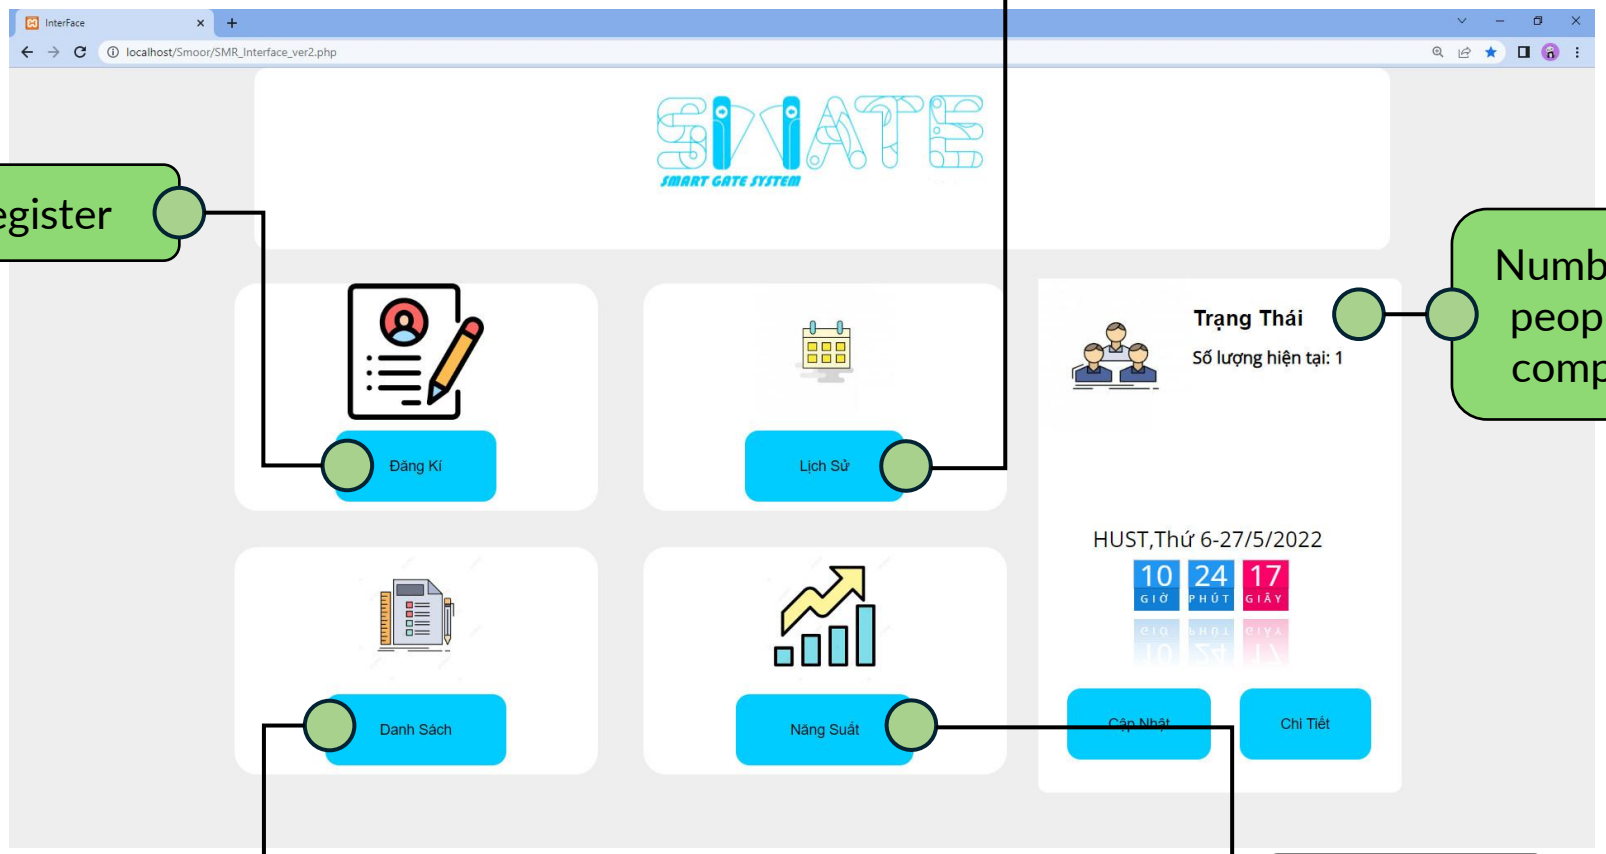

UID reader

- 3D shell designing and manufacturing ✓
- Programing ✓

Smart Gate System

❑ Result

Product's efficiency:

- Completed the project with fully functions.
- The manufactured product work well and stably

Achievements:

- First prize in 2022 Scientific Research Conference organized for the 39th time by Hanoi University of Science and Technology.
- Second prize in 2022 Scientific research exhibition organized by Hanoi University of Science and Technology.
- Second prize in 2022 BKvideas organized by Hanoi University of Science and Technology. (For more detail: https://fb.watch/oSAAiBFwqJ/).
- Interviewed and featured on the school's homepage.(For more detail: LINK)
